Tool for searching for people lost at sea

Search a wide area at sea and quickly find people in distress.

The survival rate in drifting accidents (involving injuries, hypothermia, etc.) decreases significantly over time.

Reducing search time is critically important for improving survival rates.

‘Search Me’ locates victims with search capabilities far exceeding human capacity.

**Wide
communication
area**

Searches can be
conducted from the
air or by boat.

**Multiple base
units can
cooperate in
operation.**

Improves search
efficiency.

**Significantly
reduced search
time.**

6-second scans
improve survival rates

Visibility up to 1 to 5 km

Also be used to search for lost
people in the mountains.

No data charges apply !

Introduction example :

• Air Self-Defense Force Western Air Force Headquarters ...etc.

**When someone falls into the water,
you can immediately notice and rescue them.**

1. If a person or object carrying the extension unit falls into water or moves far away, the base unit immediately sounds an emergency alert to notify you.
2. Pressing the search button on the base unit displays the "direction" and "distance" to the extension unit, enabling a swift rescue operation.
