Simultaneous reporting and sharing by posting photos taken from the disaster site.

Real-time sharing with all registered terminals at the same time as posting.

Location and photographer information is blotted to the Map app.

Can be installed on existing mobile devices! Achieving overwhelmingly low costs!!

Accurate information collection
Help reduce damage!

VIEW Point 1 — **Automated image aggregation**
- "Visualization" of the disaster site in real time.
- Information is "automatically sorted" in chronological order.

VIEW Point 2 — **Can be extracted with urgency/shooting time/comments**
- From reports with high urgency "same time" from "anywhere".

VIEW Point 3 — **Images and videos can be saved for a long time!**
- Can be used as a "disaster recording tool" for disaster response perfect for "looking back".

Please see the back page for function details ▶▶▶

HAZARD VIEW

Shooting from iPhone ➡ Simultaneous reporting/sharing ➡ Centralized management on the management screen.
